

MEN - Metal nozzle

This nozzle is highly suitable for Plymovent's fixed extractors and exhaust reels. It is designed to take in cooling air thereby reducing the exhaust fume temperature and resistance in the exhaust system as well as guaranteeing correct exhaust reels. The nozzle comprises a powder coated metal pipe and a springloaded metal lid. The rubber lid which shuts tight and functions as a draught valve when the nozzle is not being used, opens using a rubber-faced handle.

Temperature resistant: 300°C/570°F.
